

IMMUNIZATION SCHEDULE

NOTES

- Influenza is recommended every year starting at 6 months (the first time, 2 doses are given one month apart, then just annually)
- COVID-19 vaccine (Moderna) is offered every year starting at 6 months
- We use combination vaccines because they're as effective and safe and minimize the number of injections needed
- For this reason, a 4th HepB dose is given since it can't be removed from the combination vaccine and is not harmful
- Tdap should be given every 10 years after age 11
- The brands of vaccines we use of vaccines are listed below. Reach out anytime with questions!

Vaccine	Brand	Vaccine	Brand	Vaccine	Brand
Dtap-Polio-Hib-Hep B	Vaxelis	Hib	ActHib	Varicella	Varivax
Pneumococcal	Prevnar 20	Hepatitis A	Vaqta	Dtap	Daptacel
